

EZRA HEALING November Newsletter

“Dive into November's newsletter to unravel the ivermectin debate and explore the significant distinctions between tablets and capsules in this important health discussion”.

Dear Wellness Warriors,

You are receiving this SECOND monthly newsletter because you have had at one point connected with Ezra Healing along your wellness journey. Thank you for THAT!

This is TEAM EZRA connecting with you from BC, Canada. Svetlana, a former Registered Nurse / Founder of Ezra Healing & Michael the Apothecary, Co-Founder of Ezra Healing.

We are reaching out to you today and extending an invitation to explore our updated website.

TURBO CANCER

We would like to bring to your attention the RAPID RISE of cancers we are currently witnessing globally amongst the C19 vaxxed population. We believe the C19 vaccines are the smoking gun in terms of the dramatic rise in cancers. Historically vaccines have been socially acceptable for the most part, but since the spike in cancers post C19 vaccination, people are NOW seeing the TRUTH that vaccines CAUSE cancer, disease, injury and death.

We are now seeing people who had accepted the C19 and booster vaccines, end with a diagnosis of new cancer or a return of their previous cancer. This rapid onset has been termed TURBO CANCER.

Please see the following podcast with Oncologist Dr. William Makis and Nurse Svetlana discussing the rapid rise of turbo cancer and some possible causes (vaccines) &

solutions (high dose ivermectin). We know the traditional chemotherapy & radiation are

under 8% effective in treating cancer and the quality of life while on these toxic chemicals is very poor.

THERE MUST BE A BETTER WAY!

APOTHECARY MICHAEL SPEAKS

We would like to bring to your attention the BIG difference between TABS and CAPSULES at this time.

Michael the Apothecary, with his decades of experience shares with you his trusted research and understanding on this topic.

Ivermectin - the case of Tablets vs Capsules

A member of our network in the Edmonton area brought to our attention a brand of Ivermectin marketed under the “Be-Kind-Team-Unity” brand label. This was a capsule product that not only was ineffective, but also made several people very ill. This a shameful example of a unscrupulous group of individuals profiteering from people’s naivety and need. This is the antithesis of Ezra Healing’s mission and mandate.

Why is this fact an important factor when choosing your Ivermectin? There are 3 significant interrelated reasons:

1 - Legitimacy and Authenticity

It is Standard Operating Procedure (SOP) within the Good Manufacturing Practices (GMP) regulations that ensures that medicinal products are consistently produced to the quality standards appropriate to their intended use and as required by the product specification that all medicines which can be tableted are presented as tablets, and only those products which cannot be pressed into tablets are to be presented as capsules or via oral or injectable solutions.

As an example, all Ivermectin products should be presented as tablets, whereas nearly all antibiotics will resist tableting and therefore must be presented as capsules.

Why is this important?

Any seller of Ivermectin that is marketing their product in capsule form lacks the legitimacy of following GMP standards and therefore they must immediately be questioned as to the Legitimacy and Authenticity of the product itself. Improper presentation as a capsule raises a serious red flag with the product itself.

2 - Production Scale and Accurate Dosage

The nature of the capsule filling manufacturing process screams of a small scale manual “basement operation”. The pharmaceutical manufacturing equipment required to produce capsules at scale cost ten of thousands of dollars, and if sellers had access to such equipment they would opt to press their Ivermectin into proper tablets rather than to encapsulate them. If a seller does not have access to commercial scale manufacturing equipment they are then by deduction a small scale, and by extension an unreliable manufacturer/seller.

Why is this important?

Accurate dosing is incredibly difficult to achieve on a small scale without using the proper equipment. Accurately and reliably blending 12 mg (twelve one thousandths of a gram) of the active ingredient into the excipients to allow for proper tableting (inert binders and flow ingredients) is a very sophisticated equipment and time intensive process. A slightly greater concentration will not be harmful, however, under-dosing could have serious health implications including death!

3 - Active Ingredients vs Fillers

Due to the incredibly labour intensive process of small scale tableting, larger than necessary tablets are regularly used. This creates a situation where a far larger than necessary volume of fillers is required. Consider then that the type “0” and “1” capsules that we typically see upstart competitors Ivermectin presented in contain a total volume of 680 mg and 480 mg per capsule respectively (at 1.0g/ml product

density). That represents an excessive large volume of fillers necessary compared to the 12 mg of active ingredients.

Why is this important?

As discussed, as small scale basement operators are not following GMP regulations for product presentation, why would they follow any other SOPs? Who knows what fillers they are using to bulk up their capsules! Are they clean and free from allergens and contamination? Whether those are either biological, chemical, toxic, or heavy metals? Who knows? They probably don't know!

Recall the 2008 Chinese scandal where melamine was included into infant formula and many children became very ill or died. Do you think this was an isolated situation? Hardly, I am sure the Chinese "red-curtain" of censorship has blocked many similar stories since then. A rational person would then conclude that purchasing fillers online from an unknown source would be a very risky proposition.

Lets agree that if a manufacture/seller of capsulated Ivermectin lacks the sophistication to properly produce and present their product, they are also not established enough to have secure vendor relationships to ensure that they are buying clean and unaltered raw materials.

Concluding Thoughts

When you need Ivermectin for your personal or your family member's health you require and deserve a GMP level medicinal product that you can trust and rely on. Period.

What is the moral of this story?

Only buy your Ivermectin from a known and trusted source. Tablets are key, capsules are bogus.

SAVING LIVES MATTERS!

Christmas WELLNESS Season

As the Christmas Season approaches, we want to suggest giving the gift of WELLNESS to your loved ones. Consider purchasing any supplements or consultations you wish as a gift and we will ship out the gift and a personalized note included from you.

Stay tuned for Decembers newsletter as we have some exciting news about STEM CELL ACTIVATION THERAPY to kick start the NEW 2024 YOU ! Ezra Healing is focussed on SOLUTIONS that empower and inspire you to live your best life ever.

We win by healing ourselves first, then others!

Sincerely, with love & respect...

Svetlana & Michael
